Art Unit: 2826

DETAILED ACTION

Allowable Subject Matter

- 1. Claims 1-11 allowed.
- 2. Claims 18-23 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 12-17 rejected under 35 U.S.C. 103(a) as being unpatentable over Fujii et al. (6,263,734) in view of Kaneko (5,239,870) further in view of Yoshida et al. (6,293,149).

Regarding Claims 12-17, Fujii et al. disclose a piezoelectric acceleration sensor and method of detecting acceleration and manufacturing method thereof where an acceleration sensor comprises a longitudinal effect type detection unit and a lateral effect type detection unit. The longitudinal effect type detection unit comprises a longitudinal effect type piezoelectric element comprising piezoelectric body of a thin film, a first electrode, and a second electrode. A detection circuit detects an acceleration in a predetermined direction, based on an output of both the longitudinal effect type detection unit and the lateral effect type detection unit. Fujii et al. fail to disclose the required cantilever and the required piezoresistor structures. However, Kaneko discloses a semiconductor acceleration sensor with reduced cross axial resistivity where

~ Application/Control Number: 10/604,663

Control Number: 10/004,0

Art Unit: 2826

the required cantilever structure is disclosed. Furthermore, Yoshida et al. disclose an acceleration sensor element and method of its manufacture where the required piezoresistor is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required cantilever and the required piezoresistor structures in Fujii et al. as taught by Kaneko and Yoshida et al. respectively in order to have a semiconductor acceleration sensor with higher performance.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (703) 305-3868. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (703) 308-6601. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-7722.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Starting February 4, 2004, Examiner Fazli Erdem's phone number will be changed to (571) 272-1914 and his SPE Nathan Flynn's phone number will be changed to (571) 272-1915
